

Work Experience Brief - The Challenge

The year is 2056 – Climate change has ravaged planet Earth. Our top scientists estimate we have 6 months to either fix our planet or leave, forever.

It's the worst possible situation for humanity, we are fighting for our survival. How are we doing this? With SPACESHIPS!

Spaceships? Wouldn't it have been better to have acted on the warning signs far earlier and ditched fossil fuels, reduce our carbon footprints and protect our natural resources? Nah, we have spaceships now, that's more fun.

You must choose if you are in Team Fight or Team Flight:

- Team Fight will stay on Earth and use their spaceships to clean up the planet. How? That's up to you.
- Team Flight will need spaceships to transport them to our new home planet. What would these ships look like?

The Challenge

This is a challenge against the clock to develop your website skills. The challenge will take part over the 30 hrs and will test your abilities, you will need to complete your work experience log.

We also want you to come up with a backstory for your fleet and explain why the spaceship designs work for either Team Flight or Team Fight and how you will promote your website to encourage people to join your cause.

You should add colour to your spaceships, consider your design of your website, who is your target audience for this project?

- You need a minimum of 2 pieces of javascript
- You need a minimum of 2 pieces of HTML,CSS in your website
- Be creative and challenge yourself - Make a minimum of 3 pages using HTML

STRETCH TASK: You can add other elements that make your website stand out from the rest.

Things to Consider

Start by sketching out your ideas. Think about what different vehicles would be needed by either Team Flight or Team Fight. Team Flight might need people carriers, space trucks, animal transporters etc. Team Fight might need tree planters, ocean cleaners, weather monitors etc.
